

Business Requirement Document (BRD)

Project Title: Hospital Performance & Patient Analytics Dashboard

Business Objective:

To provide hospital management with a centralized analytics dashboard for monitoring patient flow, hospital performance, doctor workload, and billing insights to support data-driven decision-making.

Business Problem:

Hospital data is scattered across multiple systems, making it difficult to track admissions, analyze trends, manage resources, and monitor billing performance efficiently.

Key Stakeholders:

Hospital Management, Operations Team, Medical Administrators, Finance & Billing Team, Data Analytics Team.

Scope:

Includes patient analytics, doctor and hospital performance, admission trends, medical conditions, age group analysis, and billing insights. Excludes real-time patient monitoring and clinical diagnosis.

Key KPIs:

Total Patients, Total Doctors, Average Billing Amount, Total Admissions, Billing by Insurance, Average Length of Stay.

Functional Requirements:

Interactive filters for hospital, year, admission type, doctor, room, blood type, and gender. Visualizations include KPI cards, bar charts, line charts, donut charts, and stacked charts.

Business Benefits:

Improved resource planning, better doctor workload management, enhanced emergency readiness, efficient billing tracking, and faster strategic decision-making.

Success Criteria:

Improved operational efficiency, reduced overcrowding, increased dashboard adoption, and better visibility into hospital performance.
